[https://www.w3schools.com/jquery/jquery\\_traversing.asp](https://www.w3schools.com/jquery/jquery_traversing.asp)

**What does the fetch() method do? How can it be used instead of an AJAX call?**

The fetch() method is used to access data from a server. It is asynchronous and returns a promise if there isn't an error. It can be used in an app that doesn't use jquery and if other libraries don't allow it.

**In JQuery, what does it mean to "traverse the DOM"?**

Traversing the dom is moving through elements to access relative elements. Like a family tree it can be helpful in accessing what you need to within the family.
